

**SYSTEM AND METHOD FOR CUSTOMIZING AND  
PROCESSING BUSINESS LOGIC RULES IN A BUSINESS  
PROCESS SYSTEM**

**ABSTRACT OF THE DISCLOSURE**

5           Systems and methods for customizing business logic rules within a business  
process automation system and for processing business logic rules in a business process  
automation system are disclosed. The method for customizing business rules of a  
business logic application generally comprises serving a content page to a client browser  
of a client by a server that allows entering and modifying of data relating to a business  
10   logic rule, generating data by the server according to a predefined format such as a  
predefined XML format from information received via the content page, and  
automatically committing the generated data in the predefined format into a database.  
Preferably, a verification process such as by using DTDs (Document Type Definitions) is  
performed by the server prior to committing the data. The database stores data including  
15   data relating to business logic rules for implementing business logic as entries in the  
database and the generated data is committed into a corresponding entry in the database.  
Upon committing, the committed database business rule entry is ready for execution by  
the business logic application.
